                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ş
                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents a human protein with hydrophobic domains. The protein possesses a hydrophobic domain and so is a secretory protein or a membrane protein. The protein is used as an antigen to prepare antibodies. The polynucleotide sequence is useful as a source of probes for genetic diagnosis. It is also useful for producing the protein in large quantities and for gene therapy. The eukaryotic cells are used for detecting the receptors or ligances corresponding to the protein and for detecting small novel pharmaceuticals. The antibodies are also used for detection, quantification and purification of the proteins. Both the protein and polynucleotide may be used in research or as nutritional
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; hydrophobic protein; secretory protein; membrane protein; sepsis; tumour inhibition; immune deficiency; autoimmune disorder; anaemia; burn infectious disease; cancer; ulcer; periodontal disease; coagulation; parkinson's disease; fertility; immune response; thrombosis.
                                                                                                                                                           sources or supplements. The protein may have cytokine and cell proliferation/differentiation activity, immune stimulating or suppressing activity, hematopoiesis regulating activity, tissue growth activity, activin/inhibin activity, chemotactic/chemokinetic activity, hemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity and tumour inhibition activity. It may therefore may be used to treat immune deficiencies resulting from autoimmune disorders or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 1;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC expressed in human tissues) proteins given in AAB36579 to AAB36633. The CC expressed in human tissues) proteins given in AAB36579 to AAB36633. The CC present invention describes an isolated polypeptide (A) comprising an CC amino acid sequence selected from one of 55 amino acid sequences 42-876 cC residues in length, corresponding to FLEXHT-1 to FLEXHT-55, a 90 % CC identical sequence, and a biologically active or immunogenic fragment of the sequence. The FLEXHT proteins can have antianaemic, anticonvulsant, CC antiinflammatory, hepatotropic, antidiabetic, antisportatic, antiuleer and antirheuratic activities, and can be used in gene therapy. The CC and antiinflammatic activities, and can be used in gene therapy. The CC polynucleotide sequences can be used to express the protein sequences. CP pharmaceutical compositions comprising FLEXHT can be used to treat disorders including anaemia, epilepsy, arteriosclerosis, cronis disease, developmental disorders, cancers, and immunological CC treat disorders such as asthma, bronchitis, cirrhosis, Cronis disease, CC diabetes mellitus, gout, Grave's disease, multiple sclerosis, and collecterities, and cronisis, pancreatitis, psoriasis, rheumatoid arthritis, and

                                                                                                                                                                                                 The invention relates to isolated polynucleotide (I) and CC polynepstide (II) sequences. (I) is useful as hybridisation probes, CC polynerase chain reaction (PCR) primers, oligomers, and for chromosome CC polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC (II). (II) is useful for generating antibodies against it, detecting or CC (II). (II) and its binding partners are useful in medical. CC (Inaging) of sites expressing (II). (I) and (II) are useful for treating CC (Inaging) of sites expressing (II). (I) and (II) are useful for treating CC (Inaging) of sites expressing (II). (I) and (II) are useful for treating CC (Inaging) of sites expressing (II). (I) and (II) are useful for treating CC (Inaging) of sites expressing (II). (I) and (II) are useful for treating CC (Inaging) of sites expressing (II). (I) and (II) are useful for treating CC (II) and (II) are useful for treating

The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNAs because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream

Copolypeptide and an anti-CCP antibody is useful for medulating the cell cycle or growth of a plant such as Arabidopsis thaliana, rice, wheat, comaize, tomato, alfalfa, oilseed rape, soybean, sunflower and canola.

CC cop nucleic acid and polypeptide molecules are useful as modulating to treat disorders characterised by insufficient or excessive production of ccp protein or production of ccp protein forms which have decreased or cof ccp polypeptide are useful as herbicides or plant growth regulators.

CC protein or production of ccp protein forms which have decreased or cf ccp polypeptide are useful as herbicides or plant growth regulators.

CC plant morphology, biochemistry and/or physiology, the length of the Gl, cs, G2 and/or w phase of the cell cycle of a plant, initiation, promotion, cs stimulation or enhancement of cell division, DNA replication, seed set, seed size, seed development, tuber, fruit, leaf formation, shoot and root initiation and/or development, tuber, fruit, leaf formation, shoot and root convironmental conditions, including abiotic stress such as pathogen attack, to modulate the cell cycle due to environmental conditions, including abiotic stress such as cold, mutrient deprivation, heat, drought, salt stress, or biotic cold, mutrient deprivation, heat, drought, salt stress, or biotic cold, mutrient deprivation, heat, drought, salt stress, or biotic cold, mutrient deprivation, heat, drought, salt stress, plant reproduction and seed development, endoreduplication in storage cells, cold stress such as gathogen attack, to modulate e.g. enhance crop yields, and attenuate plant architecture, plant quality traits, plant collis, cs storage tissues and/or storage organs of plants or its parts. CCP is useful for expressing CCP protein is oderect CCP mRNA, or a genetic cold lesion in a CCP gene and to modulate CCP activity. The present sequence crop calculation of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New cell cycle protein and nucleic acid molecule encoding it useful for regulating cell cycle progression in plants and for identifying modulators which are useful as herbicides or plant growth regulators -

CC 86-1370 residue amino acid sequences, given in the specification, a
CC mature form of them, or a sequence that is at least 95 % identical to, or
CC having one or more conservative amino acid substitutions in one of the 36
CC amino acid sequences. The polypeptides, nucleic acid molecules and
CC antibodies of the invention are useful in the manufacture of a medicament
CC for treating a syndrome associated with a human disease, preferably a
CC NOVX-associated disorder. The nucleic acid molecules and
CC antibodies are useful for treating, preventing or diagnosing diseases
CC (viral, bacterial, fungal, helminthic, and protozoal), anorexia, cancer-
CC associated cachexia, neurodegenerative disorders, Alzheimer's disease,
CC (viral, bacterial, fungal, helminthic, and protozoal), anorexia, cancer-
CC aracious dyslipidaemias, or metabolic disturbances associated with
CC obesity, metabolic X syndrome, and wasting disorders. The nucleic acids
CC and polypeptides may also be used as targets for the identification of
CC small molecules that modulate or inhibit e.g. neurogenesis, cell
CC differentiation, cell proliferation, haematopoiesis, wound healing and
CC immunospecifically to NOVX substances for use in therapeutic or
CC diagnostic metabos. The nucleic acids are further used as hybridisation
CC probes, in chromosome mapping, tissue typing, preventive medicine, and
CC invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            21-FEB-2002;

```
for treating a syndrome associated with a human disease, preferably a NoVX-associated disorder. The nucleic acid molecules, polypeptides and antibodies are useful for treating, preventing or diagnosing diseases such as metabolic disorders, diabetes, obesity, infectious diseases (viral, bacterial, fungal, helminthic, and protozoal), anorexia, cancer associated cachexia, neurodegenerative disorders, Albeimer's disease, parkinson's disease, immune disorders, haematopoietic disorders, cancer and various dyslipidaemias, or metabolic disturbances associated with obesity, metabolic x syndrome, and wasting disorders. The nucleic acids and polypeptides may also be used as targets for the identification of small molecules that modulate or inhibit e.g. neurogenesis, cell immunospecifically to NOVX substances for use in therapeutic or diagnostic methods. The nucleic acids are further used as hybridisation probes, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. This sequence represents a NOVX related protein of the
                                                                                                                                                                                                                                                                                                                                                                                               amino acid sequences. The polypeptides, nucleic acid molecules and antibodies of the invention are useful in the manufacture of a medicament
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated polypeptide comprising any of the 86-1370 residue amino acid sequences, given in the specification, a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  preventing, diagnosing or tre

                                                                                                                                                                                                                                                                                                                         The invention relates to stomach cancer-expressed genes (AAI93842-AAI939). The (AAI93842-AAI939)17) and the encoded proteins (AAM93967-AAM94039). The genes can be used as markers in blood tests for screening for the early stages of the disease. The proteins and peptides can be used as targets for screening for compounds to treat the disease. They can also be used for predicting micro-metastases. The gene can predict peritoneal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               5
                  The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence the complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a splynucleotide which comprises a 3'-end sequence, where the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              29-JUL-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; AAB92495 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the present invention.
